

Sukhbir (Sukh) S. Sachdev

“The practical, hands-on and problem solving skills you learn in school and field environment prepares you for success in whatever area you choose to work in. As an Electrical Engineering Technologist, I chose to work in an environment which gave me the opportunity to be mentored by both engineers and field staff to experience various aspects of engineering and trades. During this tenure I learned to respect others regardless of their position title which helped me develop better people and technical skills. Later on I upgraded my education and made transition from Technologist to Engineer I relied on my previously acquired field experience, engineering knowledge and people skills in addition to my newly acquired theoretical and analytical skills to do my job effectively throughout my career and continuously encouraged me to positively influence others to excel in their work.”

- Sukhbir (Sukh) S. Sachdev, P.Eng, Director-Grid Control Centre at SaskPower
