

Solar and Wind-powered Pump Grant

EFFICIENCY PROGRAMS

Solar and wind-powered pumps are a great option for remote areas.

Grants are for the installation and costs of a solar or wind-powered water pump system. The grant covers 50% of costs up to \$500. Payments are subject to proof of sale and installation from a Saskatchewan supplier.

Here are the steps to apply:

1. Apply

The solar and wind-powered pump grant is open to all Saskatchewan businesses. To meet this, you must buy a pump system from a Saskatchewan-based supplier.

After installing the pumping system, fill out the application form and send it in. Customers can

install systems at multiple locations and apply for the grant on each separate installation/location.

If you're unsure if your project meets requirements, please contact us to confirm.

2. Contact Information

If you wish to speak with someone about the program, please call 1-888-757-6937 and ask to speak to the Business Manager in your area of the province.

Applications can be sent to:

Customer Relations
2111 Albert Street N
Regina SK S4P 0S1
