- 11. Appendix A: Initial Rebate Application 9
- 12. Appendix B: Rebate Application 11

1. PROGRAM OVERVIEW

SaskPower's Net Metering program provides SaskPower customers with the opportunity to generate up to 100 kW (DC) of power, using an eligible energy resource, to offset their own power use.

Power you generate is used by your building first. Any extra power credits are carried forward to the next month and applied to that month's power use. The credits are carried forward, month by month, over a three-year period. At the end of the three-year period, any remaining credits are reset to zero and a new three-year period begins. For example, for a Net Metering project that was connected in April 2019, the credits would be reset in April 2022, 2025, 2028, etc.

A bi-directional meter will be installed by SaskPower to track the power coming from and going to the SaskPower grid.

2. ELIGIBILITY

2.1. ELIGIBLE APPLICANT

The program is open to all SaskPower customers, including residents, farms and businesses.

If **you're not a SaskPower customer**, check with your power provider for program details. However, you're still eligible to receive the Government of Saskatchewan's Net Metering Rebate. Please ensure you submit the *Initial Net Metering Rebate Application* (Appendix A), including an Interconnection Agreement from your power provider, before your system is installed.

2.2. ELIGIBLE ENERGY RESOURCES

Power must be generated using one of the following qualified resources:

- I. **Solar:** power generated by capturing sunlight and converting it through panels.
- II. **Low-impact Hydro:** power generated by sending water from a river through turbines, which spin and generate power.
- III. **Biomass/Biogas:** power generated by burning organic materials to create heat and steam to spin turbines, which generate power.
- IV. **Flare Gas:** power generated through the combustion of solution flare gas.
- V. **Waste Heat Recovery:** power generated through the recovery of usable energy from a source of waste heat, such as a manufacturing process, that does not use any other source of fossil fuel to generate the power.

All generation equipment used must be certified for use in Canada. For more information on Canadian Electrical Codes, the Electrical Inspection Act, and Saskatchewan interpretations, visit saskpower.com.

2.3. PROJECT SIZE

The program allows for projects up to 100 kW (DC) nameplate generating capacity. Customers are eligible for a maximum of 500 kW per year.

3. PAYMENT RATES

SaskPower will bank and credit the extra power you generate at the same rate that you buy power from SaskPower. For example, if you buy power at \$0.14228/kWh (2018), then your banked power will be credited at that rate. Credits are not paid out; they are carried forward and applied to your next month's power use.

4. CONTRACT TERM

The Net Metering Interconnection Agreement is for an initial term of ten years and includes an option to renew for an additional ten years. The additional 10-year term is subject to the terms and conditions of the program at the time of renewal. You may terminate the agreement by giving thirty (30) days written notice to SaskPower. The agreement will automatically terminate if you terminate your SaskPower account at the location of your Net Metering system.

5. SUMMARY OF COSTS

- I. **Application Fee:** A \$315 (GST included) non-refundable fee must be paid within 30 calendar days of the invoice issue date.
- II. **Electrical Permits:** You are required to obtain an electrical permit before beginning any construction of your project. For more information, including prices, visit the electrical inspections page on saskpower.com
- III. **Interconnection Costs:** You are responsible for all costs associated with connecting your project to the SaskPower grid, including system and facility upgrades as required. This includes the cost of a bi-directional meter of \$498.75 (GST included). In rare situations, these costs can be substantial, we recommend you wait for the results of your quote letter before making your purchase. All costs will be included in your Quote Letter and identified as construction costs.
*If you have a 120/208V single phase service, please check with SaskPower before starting your project. Modifications will be required and there will be additional costs to connect.
- IV. **Project Costs:** You are responsible for all costs associated with the purchase and installation of your project, including equipment and contractor costs.

6. NET METERING REBATE

The Government of Saskatchewan's Net Metering Rebate provides a one-time rebate equivalent to 20% of your system's equipment and installation costs to a maximum of \$20,000 per project. The maximum rebate per customer for all projects is \$100,000 per year. The rebate amount is currently calculated at \$0.61 per watt. For example, if you install an 8.5 kW system, your rebate would be \$5,185. The dollar per watt rebate amount may be revised from time to time to ensure it remains equivalent to 20% of system equipment and installation costs.

Only equipment purchased by the customer is eligible. Rebates will not be issued for leased equipment.

To apply for the Net Metering Rebate, you must submit a *Net Metering Rebate Application* (Appendix B) along with copies of your paid invoices to customergeneration@saskpower.com. Please do not send original invoices, they will not be returned.

This rebate is also available to Saskatoon Light & Power and Swift Current Light & Power customers. If you're a customer of one of those utilities, please ensure you submit the *Initial Net Metering Rebate Application* (Appendix A) before your system is installed. Once your system is installed and connected to the power grid, you must submit the *Net Metering Rebate Application* (Appendix B), along with copies of your paid invoices and a signed Interconnection Agreement from your utility to customergeneration@saskpower.com.

In return for the Net Metering rebate payment, participants in the program agree to allow SaskPower to request, on an annual basis for the next 10 years, their utility and generation records of electricity production data to assist SaskPower, its agents, suppliers and contractor in the administration, operation and delivery of the Net Metering Program, assessing its impact and reporting publicly only data in aggregate form. Your energy production data and utility billing records are critical in measuring the positive environmental impacts of the Net Metering Program and will help to make improvements or refinements in the future.

6.1. GOVERNMENT FUNDING

If other government funding is used to purchase and/or install equipment, this must be identified on the *Net Metering Rebate Application* form. Rebate funding will be capped at the point where 100% of the costs have been paid by government sources.

7. APPLICATION AND INTERCONNECTION PROCESS

SaskPower customers can apply to the Net Metering program at any time during the year. To apply, follow the steps below.

7.1. APPLICATION FORM

- I. Complete the online Net Metering application form on saskpower.com and include all required exhibits listed below. Please ensure the name on the application matches the customer name on the SaskPower account. You are also responsible to obtain any permits and approvals required by your local municipality.
 - Electrical single line diagram, drawn by an electrician or engineer, from the generating system to the main AC breaker and to the grid.
 - Site location map, including the location of the generating system and SaskPower meter location, and a North Arrow.
 - Manufacturer's datasheets for all equipment to be installed (i.e. modules, inverters, microinverters, generators, etc.)
- II. After you submit your application, including the required documents noted above, SaskPower will issue an invoice for the \$315 (GST included) non-refundable application fee to the customer on the application. The invoice must be paid within 30 calendar days of the issue date.
- III. Once your invoice is paid, your application will be sent to SaskPower's engineering department to conduct an interconnection study.

7.2. ELECTRICAL INSPECTIONS REVIEW

This step should be completed at the same time as the application form. Electrical Inspections will review your project to ensure it meets Canadian Electrical Code-Saskatchewan Interpretation requirements. Project reviews will take approximately 6-8 weeks.

- I. Complete the Renewables Information Check Sheet available on saskpower.com and email it to Electrical Permits at electricalplansreview@saskpower.com. Make sure to also include all required exhibits listed below.
 - Electrical single line diagram, drawn by an electrician or engineer, from the generating system to the main AC breaker and to the grid.
 - Site location map, including the location of the generating system and SaskPower meter location, and a North Arrow.
 - Manufacturer's datasheets for all equipment to be installed (i.e. modules, inverters, microinverters, generators, etc.)

7.3. ELECTRICAL PERMIT

- I. Your contractor must obtain an electrical permit before beginning any work on your system. An electrical permit is required before an on-site electrical inspection of your system is conducted and installation of a bi-directional meter can be completed

7.4. SASKPOWER QUOTE LETTER AND INTERCONNECTION AGREEMENT

- I. Once we have received your completed application form, required exhibits and payment, we will email you a Quote Letter and the Net Metering Interconnection Agreement. The Quote Letter will include the estimated total costs of your project's interconnection to SaskPower's grid, including the cost of a bi-directional meter.

If you have any questions about the costs included, the business office listed on the Quote Letter is available to assist you.

- II. Sign and return the Quote Letter and Interconnection Agreement, as well as payment for the costs identified in the Quote Letter. Payments can be made online through your financial institution by selecting "*SaskPower Other Services*" as the payee and entering the account number found on your invoice. SaskPower will advance your project only once full payment is received.

7.5. SYSTEM INSTALLATION

- I. Once you have received your electrical permit, finalize your project with your supplier and arrange for the system to be installed.

If you change the equipment used or generation size (kW) from what you originally submitted, you may have to submit a new application form and fee.

7.6. ELECTRICAL INSPECTION

- I. Once your system is installed and working correctly, you must contact Electrical Inspections to arrange a final on-site inspection. This can be done a week or two in advance to minimize any delays. The electrician/contractor must be present during the inspection. You can contact Electrical Inspections at 1-888-757-6937 (option5) or at geis@saskpower.com.

7.7. BI-DIRECTIONAL METER INSTALLATION

- I. Once your project has passed inspection, a bi-directional meter will be scheduled by SaskPower for installation. Installation of the bi-directional meter will occur approximately 30 business days after the electrical inspection. Generation systems must not be turned on until the bi-directional meter has been installed by SaskPower.
- II. Your meter will be read monthly by a SaskPower meter reader. You also have the option to call SaskPower at (1-888-757-6937) to submit your meter read.

*The power you generate is used by your building first. Your SaskPower bill will show the power you received from the SaskPower grid and any extra power you generate and sent to the SaskPower grid. If you generate more power than you use, your extra power will be applied as a credit to your account; if you use more than you generate, you will be billed for the difference.

7.8. REBATE APPLICATION

- I. Once your system is installed, has passed electrical inspection and the bi-direction meter has been installed, you can apply for the Net Metering Rebate using the form found in Appendix B. Make sure to include copies of all required exhibits listed below. Please do not send originals, they will not be returned.
 - Copies of paid invoices and receipts for generation equipment and installation costs;
 - For non-SaskPower customers, a copy of your Net Metering Interconnection Agreement signed by your power provider.
- II. Once your application is received, SaskPower will review your documents and calculated your rebate amount. The Government of Saskatchewan will then issue your rebate cheque and mail it to you.

8. FURTHER INFORMATION

8.1. ANNIVERSARY DATE

To help maximize the use of credits built up in a 36-month period, we set the anniversary date for Net Metering customers based on the type of energy resource used.

- I. **Solar:** April - power credits built up over the spring and summer seasons are banked for use during the autumn and winter seasons when solar generation is lower.
- II. **Other Eligible Resources:** since other eligible generation types are not as dependent on hours of sunlight, the anniversary date will be in the month the bi- directional meter was installed.

8.2. BI-DIRECTIONAL METER

The bi-directional meter displays the power delivered (dEL) by SaskPower to you and the extra “net” power received (rEC) by SaskPower from you. The power generated by your system is first used by your building. This power will not be recorded on the bi-directional meter, because it is used before it reaches the SaskPower grid.

- If, at any time, your system generates more power than you are using, the power will be sent to the SaskPower grid and recorded on the bi-directional meter as received (rEC) by SaskPower.

- If, at any time, your system generates less power than you are using, power will be taken from the SaskPower grid and recorded on the bi-directional meter as delivered (dEL) by SaskPower.

Each month, the amount of power you send to the SaskPower grid is subtracted from the amount of power you took from the SaskPower grid.

8.3. SELF GENERATION AND POWER OUTAGES

Supplying your own power during a power outage while you are connected to the grid is a concept known as islanding. The Canada Standard Association (CSA) and Underwriter Laboratories Inc (cUL) current CSA Standard 22.2 – 107.1/UL 1741 states that during a power outage all systems that are tied to the electrical power grid must be shut down due to safety. For this reason, we require generation facilities connected into the SaskPower distribution system not be permitted to operate during a power outage and that all generation facilities shall be equipped with protection systems, which detect a power island condition and cause the generator to cease to deliver power to the SaskPower distribution system.

9. CONTACT US

Any questions about the Net Metering program can be sent to customergeneration@saskpower.com.

10. REFERENCE DOCUMENTS

All reference documents are available on saskpower.com.

- a) Electric Service Requirements
- b) Generation Interconnection Requirements at Voltage 34.5 kV and Below
- c) Terms & Conditions of Service
- d) Non-utility Generation Policy

11. APPENDIX A

INITIAL NET METERING REBATE APPLICATION (Saskatoon Light & Power and Swift Current Light & Power Customers **ONLY**)

Email completed application form to **customergeneration@saskpower.com**.

All fields are mandatory unless otherwise indicated. **Only complete applications will be processed.**
